

Projected end-to-end prefill speedup from the re-tuning (2048-token prompt)

■ previous best WMMA (= 1×) ■ projected gain (Amdahl; bar colour = GPU) ◆ measured e2e (Orin only)

4w

8da4w

Projection = measured tuned e2e + layers × Σ calls × (before – after) kernel time; release-1.4 branches, 3 e2e repeats.

† previous WMMA kernel was opt-in (default path ran tiled). Orin 8B: e2e stopped by the memory guard.
